BUILD YOUR VOICE DNA

Give your AI your actual voice

Two paths. One profile. Writing that finally sounds like you.

Framework by @alicialyttle

Shared by Stefanie Zucker

Your AI already knows you

Use this in the AI account where you have the richest conversation history.

1 Copy the conversation-history prompt

Based on the conversations we've had, analyze how I naturally communicate and create my Communication DNA.

Study not only what I say, but how I say it.

Pay attention to:

- My writing style
- My tone
- My personality and energy
- My vocabulary
- My sentence length and rhythm
- How formal or casual I am
- How direct or conversational I am
- How I explain ideas
- How I tell stories
- How I use humor
- Questions I tend to ask
- Phrases and words I use repeatedly
- How I start and end messages
- How I give instructions
- How I give feedback and corrections
- Things I repeatedly ask AI to change
- Words, phrases, or writing styles I seem to dislike or reject

Then give me the following:

1. My Writing Style: Describe how I naturally write.
2. My Tone: Describe how I naturally sound.
3. My Communication Personality: Describe the personality that comes through in my communication.
4. My Signature Patterns: List words, phrases, sentence patterns, transitions, habits, and expressions that are characteristic of me.
5. What Does NOT Sound Like Me: Identify writing habits, tones, phrases, or styles I tend to reject.
6. My Communication DNA: Create a concise profile that another AI could use to write like me.
7. Ghostwriter Instructions: Turn everything you learned into a set of instructions an AI should follow whenever it writes content on my behalf.

Do not imitate individual sentences from our previous conversations. Identify the deeper patterns behind how I communicate.

From this point forward, when I ask you to write something for me, use this Communication DNA as your ghostwriting guide unless I tell you otherwise.

Your AI is starting cold

This version tells it to interview you first, then learn from your own writing and voice.

2 Copy the interview-and-samples prompt

I want you to become my AI ghostwriter and build my Voice DNA.

First, interview me. Ask me 15 thoughtful questions, one at a time, to learn who I am and how I naturally communicate. Ask about my background, personality, opinions, values, sense of humor, favorite expressions, how I explain things, how I tell stories, how formal or casual I am, what I want my writing to feel like, and what never sounds like me.

After the interview, ask me for 3 to 10 samples of my own writing, such as emails, social media posts, articles, transcripts, texts, or other content. Also ask for audio or video transcripts where I am the only person speaking.

Study the interview and samples. Pay attention to:

- The words and phrases I naturally use
- My sentence length and rhythm
- How formal or casual I sound
- How I start and end my content
- My personality and energy
- How I explain things
- How I use humor, stories, examples, questions, and calls to action

- Words or phrases I use repeatedly
- Things I rarely or never say

Do not copy my old content. Learn the deeper patterns behind how I communicate so you can write new content that sounds like me.

When you have enough evidence, give me:

1. My Writing Style
2. My Tone
3. My Communication Personality
4. My Signature Patterns
5. What Does NOT Sound Like Me
6. A concise Voice DNA profile another AI could use to write like me
7. A practical set of Ghostwriter Instructions

Before delivering the final profile, check it against my answers and samples. If it does not sound like me, revise it.

Then use this Voice DNA as your guide whenever I ask you to write something, unless I tell you otherwise.

Only use audio where you are the only speaker.

A host, co-host, or guest can get blended into the profile without you realizing it.

Answer honestly, not impressively.

"Impressive" is how you end up sounding like everybody else.

Make the profile useful

- **Read it out loud.** Correct anything that makes you cringe.
- **Save one approved master copy.** Use it as a standing instruction in every AI tool.
- **Test it on real work.** Add your repeated corrections to the "does not sound like me" section.
